

Why Are Stellar Showers Left or Right Hand sided ?

2 Sided Showers

When we describe a 2 sided Shower as Left Handed or Right Handed, firstly we **ARE NOT** describing which way the door opens, or which side the door is on. In fact, we are not referring to anything related to the DOOR at all . We are specifically describing how the Tray and Liner will be positioned in the bathroom.

Unlike other trays, our showers have 40mm high Upstands moulded onto the sides which are positioned against the wall linings .

Here is the 40mm high Upstand which is installed hard against the timber framework of the wall. The GIB Board installs down to the top of this, and the Liner is installed over the Upstand and sealed to prevent water entering the walls

Here is front edge of the Tray. This is seen when the installation is complete. The flat "Hob" area is where the glass sits on when installed.

Pictured below is the correct installation method of a tray in a standard GIB Board Lined Wall.

The small diagonal lines between the liner and upstand represent silicone sealant.

How to Correctly identify the configuration a 2 sided shower

When you are standing looking directly at the LONGEST WALL of the Shower LINER, what side is the SHORTEST WALL of the wall LINER going to be on, your right hand, or left hand side ?

LH

Looking in the direction of the arrow, the longest side of the liner is directly in front of you. The shortest side of the liner is to our Left Hand side.
This is a LH Orientated Tray

RH

Looking in the direction of the arrow, the longest side of the liner is directly in front of you. The shortest side of the liner is to our Right Hand side.
This is a RH Orientated Tray

How to correctly identify the configuration of an alcove shower

When Alcove showers are configured LH or RH, this ONLY describes the entry position of the shower, by describing the position of the fixed panel of glass.

LH

The FIXED panel of glass is positioned on the LH side of the shower
This is a LH Orientated Alcove door

RH

The FIXED panel of glass is positioned on the RH side of the shower
This is a RH Orientated Alcove door
